Key Findings

- AI investment and automation rate both increased steadily from 2015 to 2025.
- Average AI investment varies substantially across countries, with a small group of countries leading overall investment.
- Automation rate does not show a clear relationship with employment rate, but it is generally associated with higher job displacement.
- Job creation represents a larger share than job displacement in this dataset.
- Higher AI investment is generally associated with higher productivity, although the relationship is not perfectly linear.
